

DYLAN THUNN

Software Engineer

Denver, CO | 402-630-9792 | <https://github.com/dthunn> | dylan@dthunn.com

SUMMARY

Software Engineer with 5+ years of experience designing and building scalable applications and distributed systems across the full stack. Strong experience with Java, JavaScript/TypeScript, Node.js, React, Angular, and Python, developing microservices, REST APIs, data pipelines, and event-driven systems. Experienced deploying and operating production workloads with AWS, Azure, Kubernetes, and PostgreSQL, with a focus on reliability, scalability, and maintainable software architecture.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, HTML, CSS

Frontend: React, Angular, Redux

Backend: Node.js, Express, Spring Boot, REST APIs

AI & Agent Development: MCP, Claude, pgvector, AI-Assisted Development

Databases: PostgreSQL, PostGIS, MongoDB, Redis

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Argo Workflows

Architecture: Microservices, Distributed Systems, ETL, Data Pipelines

EXPERIENCE

Software Engineer II | Jeppesen ForeFlight | Dec 2022 – Sep 2026

Initially contracted through TEKsystems and Insight Global; transitioned to full-time

- Developed and maintained Ground Controls, critical airline ground operations software used by major U.S. and international airlines for flight planning and operational safety.
- Built Angular frontend features and Java microservices deployed on Kubernetes.
- Developed ETL and data-processing pipelines using Python, Kubernetes, and Argo Workflows.
- Used Claude extensively for AI-assisted development, creating reusable skills and workflows for planning, implementation, testing, and deploying services to Kubernetes environments.
- Developed interactive aviation GIS interfaces with ArcGIS for visualizing flight routes, operational boundaries, and geospatial data.

Software Engineer | PayPal | Jan 2022 – Dec 2022

Contracted through Modis

- Built automation tools that streamlined customer service workflows, reducing manual processing and improving response times within a microservices environment.
- Developed and maintained applications within a large-scale microservices architecture using React, Node.js, and Java, leveraging RESTful and GraphQL APIs and CI/CD pipelines in a cloud-based environment.

MERN Stack Developer | Siros | Dec 2020 – Dec 2021

- Developed a GIS-focused web application using React and CesiumJS, delivering interactive 3D mapping and geospatial visualization powered by PostGIS and GeoServer.
- Designed and implemented RESTful APIs with Node.js and Express, integrating MongoDB for data persistence and JWT-based authentication for secure user management.

EDUCATION & CERTIFICATIONS

B.F.A., Graphic Design — University of Nebraska at Omaha

AWS Certified Developer – Associate

AWS Certified AI Practitioner

AWS Certified Machine Learning Engineer – Associate
