

DYLAN THUNN

Software Engineer

Denver, CO | dylan@dthunn.com | 402-630-9792 | <https://github.com/dthunn>

SUMMARY

Software Engineer with 5+ years of experience building full-stack applications and distributed systems using Java, JavaScript/TypeScript, React, Angular, Node.js, and Python. Experienced developing microservices, REST APIs, data pipelines, and cloud applications using AWS, Azure, Kubernetes, and PostgreSQL.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, HTML, CSS

Frontend: React, Angular, Redux

Backend: Node.js, Express, Spring Boot, REST APIs

Databases: PostgreSQL, PostGIS, MongoDB, Redis

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Argo Workflows

Architecture: Microservices, Distributed Systems, ETL, Data Pipelines

EXPERIENCE

Software Engineer II | Jeppesen ForeFlight | Dec 2022 – Sep 2026

- Developed and maintained Ground Controls, a critical airline ground operations software used by major U.S. and international airlines, supporting flight planning and operational safety.
- Designed and implemented Angular frontend features and Java microservices deployed on Kubernetes, supporting scalable and resilient airline operations.
- Built and maintained ETL pipelines using Python, Kubernetes, and Argo Workflows to orchestrate data processing and integration tasks.
- Participated in migrating cloud services from Azure to AWS, helping maintain continuity of critical airline operations during the transition.
- Developed interactive aviation GIS interfaces using ArcGIS to display flight routes, operational boundaries, and geospatial data for airline ground operations.

Software Engineer | PayPal (Contract) | Jan 2022 – Dec 2022

- Built automation tools that streamlined customer service workflows, reducing manual processing and improving response times within a microservices environment.
- Developed and maintained applications within a large-scale microservices architecture using React, Node.js, and Java, leveraging RESTful and GraphQL APIs and Jenkins-based CI/CD pipelines in a cloud-based environment.

MERN Stack Developer | Siros | Dec 2020 – Jan 2022

- Developed a GIS-focused web application using React and CesiumJS, delivering interactive 3D mapping and geospatial visualization powered by PostGIS and GeoServer.
- Designed and implemented RESTful APIs with Node.js and Express, integrating MongoDB for data persistence and JWT-based authentication for secure user management.

EDUCATION & CERTIFICATIONS

B.F.A., Graphic Design — University of Nebraska at Omaha

AWS Certified Developer – Associate

AWS Certified AI Practitioner

AWS Certified Machine Learning Engineer – Associate
